

Label Application System

redtagger T-200

We offer solutions specifically tailored for your requirements

This is established through our reliable technology in a balanced price-performance ratio.

T-200 systems are easily integratable in various systems and devices.

Our designs are capable of performing well with small and large labels as well as delivering enough throughput for even high-performance applications.

Labelling can be achieved on any side of a product. We strive for maximum versatility combined with easy maintenance and long operating times. This is achieved through our modular construction of all pieces in the system.

Features

- Automated processing
- Labelling applicable for all industrial fields
- Self-adhesive labels for various materials

Advantages

- 🔧 Easy maintenance through an optimized, easy to access design
- \$ High profitability with a huge saving of time in environments such as just-in-time print-data handling
- ⚡ Demand-oriented use of energy
- 🔊 Low noise-emission
- 📄 High throughput due to automated job start
- 👁 Easy Interfacing through a uniform visualization
- ⚙ Custom-built controls, tailored for specific purposes
- 🤝 Software Interfaces all from a single source
